The authors regret that we missed the proofing error in the title which should have capitalized Proterozoic as was done correctly in the original submission.

Figure 15 contained errors in the figure legend which and is corrected as follows:

Fig. 15. (a) Individual site mean directions from 2.37 Ga dykes in Dharwar Craton; (b) calculated rotation required to harmonize directions from northern and southern regions of the craton; (c) Individual site mean directions from 2.216 Ga dykes in Dharwar Craton; (d) calculated rotation required to harmonize directions from northern and southern regions of the craton; (e) individual site mean directions from 2.082 Ga dykes in Dharwar Craton; (f) calculated rotation required to harmonize directions from northern and southern regions of the craton; (g) individual site mean directions from 1.88 Ga dykes in Dharwar Craton; (h) calculated rotation required to harmonize directions from northern and southern regions of the craton. (i) Strike versus declination along the AKLD dyke in the Dharwar craton indicating no systematic relationship between strike and declination across the axis of proposed rotation by Söderlund et al. (2019). Calculations based on the methods outlined in [Pivarunas and Meert \(2020\)](#).

The authors confirm that the scientific content is unchanged and would like to apologise for any inconvenience caused.
